

Announcement

To the Copenhagen Stock Exchange and the press

*Nørresundby, Denmark, 29 April 2002
Stock Exchange Announcement no. 7/2002
Number of pages: 2*

RTX Telecom now also to provide turnkey designs within the field of GSM/GPRS technology, via an agreement with Motorola Semiconductor

RTX Telecom has signed a working agreement with the American company Motorola Semiconductor, one of the world's most significant suppliers of GSM/GPRS mobile phone chips and protocol software. The agreement will make RTX Telecom an important working partner for Motorola Semiconductor in the field of turnkey product development of GSM/GPRS handsets based on Motorola's GSM/GPRS technology.

This working relationship means that Motorola will recommend RTX Telecom as a design centre to its customers, and that RTX Telecom will recommend Motorola's well-proven i.250 platform, which contains both chipset and protocol stack, when working on proposals for GSM/GPRS turnkey development projects.

The agreement means that Motorola will provide RTX Telecom with know-how, documentation, training and tools along with direct access to the Motorola R&D departments, ensuring that RTX Telecom has "best-in-class" insight and skills as regards working with GSM/GPRS.

The i.250 platform introduced by Motorola provides a well-proven GSM/GPRS solution with a high level of integration. As a result, this solution is highly competitive in terms of price, both as regards development costs and as regards the cost price for handsets/terminals.

"This is a major factor behind RTX Telecom's decision to enter into this working agreement," states managing director Jørgen Elbæk of RTX Telecom. "For us, it is crucial that the suppliers of both the chip and software work with the same objectives and have the same basic agenda. In addition, Motorola has a very strong global position along with a highly efficient sales organisation, and has a clear road-map for chipsets and software for use in future 3G terminals featuring UMTS and EDGE. Clearly, this will be a great advantage for RTX Telecom."

“RTX Telecom is now in a position to deliver Intellectual Property and turnkey solutions within all the leading wireless standards, including CDMA2000 1x, TD-SCDMA, GSM/GPRS, Bluetooth™, DECT, DCT2.4GHz and IEEE802.11a. We have considerable experience in working with customers from all over the world, and in bringing a product to market rapidly and safely,” adds Mr. Elbæk.

At the present time, the working agreement with Motorola Semiconductor is expected to have only minor influence on RTX Telecom’s expectations for the 2001/02 financial year. However, the agreement is expected to have a positive influence on the Group’s turnover and profits from the 2002/03 financial year onwards.

With regards
RTX Telecom A/S

Jørgen Elbæk
Managing Director
