To the Copenhagen Stock Exchange and the Press

*Nørresundby, Denmark, 26. August 2002  
Stock exchange Announcement no. 12/2002*

## RTX Telecom signs first development agreement based on Motorola's i.250 GSM/GPRS platform

RTX Telecom has signed an agreement to deliver the first turnkey development project based on Motorola's i.250 GSM/GPRS platform. The value of this development project will amount to more than DKK 10 million. To ensure confidentiality, the customer company has requested that its name not be made public.

This agreement is strategically important for RTX Telecom, and it can help pave the way for new agreements in the future. RTX Telecom is very pleased to announce this first result of the company's initiatives in the field of GSM/GPRS technology. A significant basis for this work was announced in April 2002, when RTX Telecom and the American company Motorola Semiconductor signed a working agreement for the supply of turnkey product development, based on the Motorola i.250 platform. This platform is a well-proven GSM/GPRS solution with a high level of integration. Benefits to this solution include very low component prices and short development times.

The new development agreement is expected to have a positive influence on RTX Telecom's turnover and profits starting with the 2002/03 financial year, which ends on 30 September 2003. RTX Telecom will announce its expectations for the 2002/03 financial year at the same time as the annual report and accounts for the 2001/02 financial year are published, in December 2002.

With regards  
RTX Telecom A/S

Jørgen Elbæk  
Managing Director
